Far Red LED Emitter
LZ4-00R308

Key Features

- High flux output Far Red 740nm LED
- 12.8 umol/s output at 5.7W power dissipation
- Ultra-small foot print – 7.0mm x 7.0mm
- Surface mount ceramic package with integrated glass lens
- Low Thermal Resistance (2.8°C/W)
- Individually addressable die
- Very high Radiant Flux density
- Autoclave compliant (JEDEC JESD22-A102-C)
- JEDEC Level 1 for Moisture Sensitivity Level
- Lead (Pb) free and RoHS compliant
- Reflow solderable (up to 6 cycles)
- Emitter available on Standard or Serially Connected MCPCB (optional)

Typical Applications

- Horticulture
- Photo Therapy
- Machine Vision

Description

The LZ4-00R308 Far Red LED emitter generates 2.1W radiant flux or 12.8umol/s nominal output at 5.7W power dissipation in an extremely small package. With a 7.0mm x 7.0mm ultra-small footprint, this package provides exceptional radiant flux density. The patent-pending design has unparalleled thermal and optical performance. The high quality materials used in the package are chosen to optimize light output and minimize stresses which results in monumental reliability and lumen maintenance. The robust product design thrives in outdoor applications with high ambient temperatures and high humidity.
Part number options

**Base part number**

<table>
<thead>
<tr>
<th>Part number</th>
<th>Description</th>

Notes:
1. Default bin kit option is -0000
Radiant Flux Bins

Table 1:

<table>
<thead>
<tr>
<th>Bin Code</th>
<th>Minimum Radiant Flux ($\Phi$) @ $I_F = 700mA$ [1] (W)</th>
<th>Maximum Radiant Flux ($\Phi$) @ $I_F = 700mA$ [1] (W)</th>
</tr>
</thead>
<tbody>
<tr>
<td>P</td>
<td>1.60</td>
<td>2.00</td>
</tr>
<tr>
<td>Q</td>
<td>2.00</td>
<td>2.40</td>
</tr>
</tbody>
</table>

Notes for Table 1:
1. Radiant flux performance is measured at 10ms pulse, $T_C = 25^\circ$C. LED Engin maintains a tolerance of ± 10% on flux measurements.

Peak Wavelength Bin

Table 2:

<table>
<thead>
<tr>
<th>Bin Code</th>
<th>Minimum Peak Wavelength ($\lambda_P$) @ $I_F = 700mA$ [1] (nm)</th>
<th>Maximum Peak Wavelength ($\lambda_P$) @ $I_F = 700mA$ [1] (nm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>F07</td>
<td>723</td>
<td>745</td>
</tr>
</tbody>
</table>

Notes for Table 2:
1. Peak wavelength is measured at 10ms pulse, $T_C = 25^\circ$C. LED Engin maintains a tolerance of ± 1.0nm on peak wavelength measurements.

Forward Voltage Bins

Table 3:

<table>
<thead>
<tr>
<th>Bin Code</th>
<th>Minimum Forward Voltage ($V_F$) @ $I_F = 700mA$ [1,2] (V)</th>
<th>Maximum Forward Voltage ($V_F$) @ $I_F = 700mA$ [1,2] (V)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>8.0</td>
<td>11.84</td>
</tr>
</tbody>
</table>

Notes for Table 3:
1. Forward Voltage is binned with all four LED dice connected in series.
2. Forward voltage is measured at 10ms pulse, $T_C = 25^\circ$C. LED Engin maintains a tolerance of ± 0.16V for forward voltage measurements for the four LEDs.
Absolute Maximum Ratings

Table 4:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Symbol</th>
<th>Value</th>
<th>Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>DC Forward Current [1]</td>

<td></td>
</tr>
<tr>
<td>Autoclave Conditions [5]</td>
<td></td>
<td>121°C at 2 ATM, 100% RH for 168 hours</td>
<td></td>
</tr>
</tbody>
</table>

Notes for Table 4:
1. Maximum DC forward current (per die) is determined by the overall thermal resistance and ambient temperature. Follow the curves in Figure 10 for current derating.
2. LEDs are not designed to be reverse biased.
3. Solder conditions per JEDEC 020D. See Reflow Soldering Profile Figure 3.
4. LED Engin recommends taking reasonable precautions towards possible ESD damages and handling the LZ4-00R308 in an electrostatic protected area (EPA).

Optical Characteristics @ T_C = 25°C

Table 5:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Symbol</th>
<th>Typical</th>
<th>Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Radiant Flux (@ I_F = 700mA/1000mA)[1]</td>
<td>Φ</td>
<td>2.1/2.7</td>
<td>W</td>
</tr>
<tr>
<td>PF [2] 280-800nm (@ I_F = 700mA/1000mA)</td>
<td>Π</td>
<td>12.8/16.5</td>
<td>µmol/s</td>
</tr>
<tr>
<td>Wall Plug Efficiency (@I_F = 350mA/700mA)</td>
<td>Π</td>
<td>39/31</td>
<td>%</td>
</tr>
<tr>
<td>Peak Wavelength</td>
<td>λ_P</td>
<td>740</td>
<td>nm</td>
</tr>
<tr>
<td>Viewing Angle [3]</td>
<td>2Θ_1/2</td>
<td>100</td>
<td>Degrees</td>
</tr>
<tr>
<td>Total Included Angle [4]</td>
<td>Θ_0.9</td>
<td>120</td>
<td>Degrees</td>
</tr>
</tbody>
</table>

Notes for Table 5:
1. Radiant flux typical value is for all four LED dice operating concurrently at rated current.
2. PF is Photon Flux
3. Viewing Angle is the off axis angle from emitter centerline where the radiant power is ½ of the peak value.
4. Total Included Angle is the total angle that includes 90% of the total radiant flux.

Electrical Characteristics @ T_C = 25°C

Table 6:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Symbol</th>
<th>Typical</th>
<th>Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Forward Voltage (@ I_F = 700mA)[1]</td>
<td>V_F</td>
<td>8.2</td>
<td>V</td>

<tr>
<td>Temperature Coefficient of Forward Voltage</td>
<td>ΔV_F/ΔT_J</td>
<td>-8.0</td>
<td>mV/°C</td>
</tr>
<tr>
<td>Thermal Resistance (Junction to Case)</td>
<td>ΡΩ_J,C</td>
<td>2.8</td>
<td>°C/W</td>
</tr>
</tbody>
</table>

Notes for Table 6:
1. Forward Voltage typical value is for all four LED dice connected in series.
## IPC/JEDEC Moisture Sensitivity Level

**Table 7 - IPC/JEDEC J-STD-20 MSL Classification:**

<table>
<thead>
<tr>
<th>Level</th>
<th>Floor Life</th>
<th>Standard</th>
<th>Accelerated</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Time</td>
<td>Conditions</td>
<td>Time (hrs)</td>
</tr>
<tr>
<td>1</td>
<td>1 Year</td>
<td>≤ 30°C/85% RH</td>
<td>168</td>
</tr>
</tbody>
</table>

Notes for Table 7:
1. The standard soak time is the sum of the default value of 24 hours for the semiconductor manufacturer’s exposure time (MET) between bake and bag and the floor life of maximum time allowed out of the bag at the end user of distributor's facility.

## Average Radiant Flux Maintenance Projections

Based on long-term WHTOL testing, LED Engin projects that the LZ Series will deliver, on average, 70% Radiant Flux Maintenance at 65,000 hours of operation at a forward current of 700 mA. This projection is based on constant current operation with junction temperature maintained at or below 110°C.
Mechanical Dimensions (mm)

Notes for Figure 1:
1. Unless otherwise noted, the tolerance = ± 0.20 mm.
2. Thermal contact, Pad 9, is electrically neutral.

Recommended Solder Pad Layout (mm)

Note for Figure 2a:
1. Unless otherwise noted, the tolerance = ± 0.20 mm.
2. Pedestal MCPCB allows the emitter thermal slug to be soldered directly to the metal core of the MCPCB. Such MCPCB eliminate the high thermal resistance dielectric layer that standard MCPCB technologies use in between the emitter thermal slug and the metal core of the MCPCB, thus lowering the overall system thermal resistance.
3. LED Engin recommends x-ray sample monitoring for solder voids underneath the emitter thermal slug. The total area covered by solder voids should be less than 20% of the total emitter thermal slug area. Excessive solder voids will increase the emitter to MCPCB thermal resistance and may lead to higher failure rates due to thermal over stress.
**Recommended Solder Mask Layout (mm)**

**Non-pedestal MCPCB Design**

**Pedestal MCPCB Design**

*Figure 2b: Recommended solder mask opening for anode, cathode, and thermal pad for non-pedestal and pedestal design*

**Note for Figure 2b:**
1. Unless otherwise noted, the tolerance = ± 0.20 mm.

**Recommended 8 mil Stencil Apertures Layout (mm)**

**Non-pedestal MCPCB Design**

**Pedestal MCPCB Design**

*Figure 2c: Recommended 8mil stencil apertures for anode, cathode, and thermal pad for non-pedestal and pedestal design*

**Note for Figure 2c:**
1. Unless otherwise noted, the tolerance = ± 0.20 mm.
Reflow Soldering Profile

Figure 3: Reflow soldering profile for lead free soldering.

Typical Radiation Pattern

Figure 4: Typical representative spatial radiation pattern.
Typical Relative Spectral Power Distribution

Figure 5: Relative spectral power vs. wavelength @T_C = 25°C.

Typical Forward Current Characteristics

Figure 6: Typical forward current vs. forward voltage @ T_C = 25°C.
Figure 7: Typical normalized radiant flux vs. forward current @ $T_c = 25^\circ$C.

Figure 8: Typical normalized radiant flux vs. case temperature.
**Typical Peak Wavelength Shift over Temperature**

![Graph showing typical peak wavelength shift vs. case temperature.](image)

Figure 9: Typical peak wavelength shift vs. case temperature.

**Current De-rating**

![Graph showing maximum forward current vs. ambient temperature.](image)

Figure 10: Maximum forward current vs. ambient temperature based on $T_J\text{(MAX)} = 125^\circ\text{C}$.

Notes for Figure 10:
1. Maximum current assumes that all four LED dice are operating concurrently at the same current.
2. $R_{J,C}$ (Junction to Case Thermal Resistance) for the LZ4-00R308 is typically 2.8°C/W.
3. $R_{J,A}$ (Junction to Ambient Thermal Resistance) = $R_{J,C} + R_{C,A}$ (Case to Ambient Thermal Resistance).
Emitter Tape and Reel Specifications (mm)

Figure 1: Emitter carrier tape specifications (mm).

Figure 11: Emitter reel specifications (mm).

Notes for Figure 11:
1. Small reel quantity: up to 250 emitters
2. Large reel quantity: 250-1200 emitters
3. Single flux bin and single wavelength per reel.
LZ4 MCPCB Family

</table>

Mechanical Mounting of MCPCB

- MCPCB bending should be avoided as it will cause mechanical stress on the emitter, which could lead to substrate cracking and subsequently LED dies cracking.
- To avoid MCPCB bending:
  - Special attention needs to be paid to the flatness of the heat sink surface and the torque on the screws.
  - Care must be taken when securing the board to the heat sink. This can be done by tightening three M3 screws (or #4-40) in steps and not all the way through at once. Using fewer than three screws will increase the likelihood of board bending.
  - It is recommended to always use plastics washers in combinations with the three screws.
  - If non-taped holes are used with self-tapping screws, it is advised to back out the screws slightly after tightening (with controlled torque) and then re-tighten the screws again.

Thermal interface material

- To properly transfer heat from LED emitter to heat sink, a thermally conductive material is required when mounting the MCPCB on to the heat sink.
- There are several varieties of such material: thermal paste, thermal pads, phase change materials and thermal epoxies. An example of such material is Electrolube EHTC.
- It is critical to verify the material’s thermal resistance to be sufficient for the selected emitter and its operating conditions.

Wire soldering

- To ease soldering wire to MCPCB process, it is advised to preheat the MCPCB on a hot plate of 125-150°C. Subsequently, apply the solder and additional heat from the solder iron will initiate a good solder reflow. It is recommended to use a solder iron of more than 60W.
- It is advised to use lead-free, no-clean solder. For example: SN-96.5 AG-3.0 CU 0.5 #58/275 from Kester (pn: 24-7068-7601)
LZ4-4xxxxx

1 channel, Standard Star MCPCB (1x4) Dimensions (mm)

Notes:
- Unless otherwise noted, the tolerance = ± 0.2 mm.
- Slots in MCPCB are for M3 or #4-40 mounting screws.
- LED Engin recommends plastic washers to electrically insulate screws from solder pads and electrical traces.
- LED Engin recommends thermal interface material when attaching the MCPCB to a heatsink.
- The thermal resistance of the MCPCB is: $R_{\text{C-B}} = 1.1^\circ \text{C/W}$

Company Information

LED Engin, Inc., based in California’s Silicon Valley, specializes in ultra-bright, ultra compact solid state lighting solutions allowing lighting designers & engineers the freedom to create uncompromised yet energy efficient lighting experiences. The LuxiGen™ Platform — an emitter and lens combination or integrated module solution, delivers superior flexibility in light output, ranging from 3W to 90W, a wide spectrum of available colors, including whites, multi-color and UV, and the ability to deliver upwards of 5,000 high quality lumens to a target. The small size combined with powerful output allows for a previously unobtainable freedom of design wherever high-flux density, directional light is required. LED Engin’s packaging technologies lead the industry with products that feature lowest thermal resistance, highest flux density and consummate reliability, enabling compact and efficient solid state lighting solutions.

LED Engin is committed to providing products that conserve natural resources and reduce greenhouse emissions.

LED Engin reserves the right to make changes to improve performance without notice.
